PROFESSIONAL SUMMARY

Software engineer with 6+ years of production experience building high-scale software systems using Python, PHP, JavaScript/TypeScript, and cloud technologies. Experienced in AI/ML development with Python, PyTorch, Hugging Face Transformers, and DistilBERT, with strong foundations in algorithms, data structures, distributed systems, performance optimization, and software architecture. Proven experience designing complex production systems, debugging large codebases, and collaborating in Agile engineering teams. Authorized to work in the US without sponsorship.

EXPERIENCE

Junior AI Engineer – Stats AI

Jan 2026 – Present | Remote (IL, USA)

- Designed and implemented a modular Python software pipeline for NLP processing of Steam game reviews, integrating REST APIs, DistilBERT, Hugging Face Transformers, and PyTorch to achieve 89%+ classification accuracy across 10K+ reviews
- Deployed a live Streamlit dashboard with automated daily data refresh via GitHub Actions and CUDA-accelerated inference via PyTorch, reducing manual analysis time by ~70%. Stack: Python, Hugging Face Transformers, PyTorch, Streamlit, pandas, GitHub Actions, Steam Web API.
- Fine-tuned DistilBERT model on domain-specific gaming review data using transfer learning techniques, improving baseline sentiment classification F1 score by 12% over the pre-trained model.
- Designed a modular, reusable ML inference pipeline with configurable batch sizes and async data fetching, enabling the system to be extended to new game titles with minimal code changes.

Senior Software Engineer – Golootlo (DECAGON)

Jul 2019 – Sep 2025 | Karachi, Pakistan

- Designed and architected RESTful and GraphQL APIs (Laravel, Node.js, NestJS) with OAuth 2.0 and JWT authentication across distributed systems supporting 24M+ users and 60K+ peak concurrency.
- Built a subscription billing platform integrating 10+ payment gateways; boosted transaction success by 18% across 35K+ daily transactions.
- Led delivery of strategic platform initiatives including subscription billing, payment orchestration, and merchant payment solutions, contributing to 60% revenue growth and scaling the platform from 8M to 24M+ users.
- Solved complex distributed-system and performance problems across 50+ production APIs, establishing architecture standards, owning incident response, and reducing P1 incident frequency by 35%.
- Designed and optimized Elasticsearch-powered search infrastructure across 50+ customer-facing APIs, delivering sub-500ms response times under 60K+ concurrent users while improving search relevance and user experience.
- Improved API response times by 30% and reduced database load by 50% through Redis caching and query optimization.
- Integrated real-time QR payments via RAAST (government-backed instant payment rail), enabling instant merchant settlements.
- Architected and scaled a fantasy sports platform serving 50K+ players and 25K+ teams per match, implementing real-time leaderboard calculations, automated scoring pipelines, and event-driven processing using AWS SQS/SNS.
- Led, mentored, and hired backend engineers across a 10+ person team, achieving 99.95% uptime and 40% fewer production bugs while reducing release cycles by 25% through Agile/Scrum practices.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, TypeScript, SQL

Software Engineering: Object-Oriented Programming, Algorithms & Data Structures, Modular Design, Distributed Systems, System Design, Performance Optimization, Agile/Scrum

AI/ML: PyTorch, Hugging Face Transformers, DistilBERT, NLP, Machine Learning

Backend: Laravel, Node.js (Express.js, NestJS), FastAPI, REST API Design, GraphQL

Frontend: React (Next.js), HTML, CSS, Bootstrap, jQuery

Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps: AWS (S3, EC2, RDS, SQS, SNS, OpenSearch, ElastiCache), Jenkins, Git, CI/CD, Linux

Payments: Stripe, CyberSource, RAAST, PayFast, 1Link

Security: OAuth 2.0, JWT, API Authentication, Role-Based Access Control (RBAC)

Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana)

Architecture: Microservices, Distributed Systems, Event-Driven Architecture

AI Tools: Claude Code, Cursor, ChatGPT

EDUCATION

Masters in Computer Science & Information Technology — NED University, Pakistan (2022)

Bachelors in Computer Science — University of Karachi, Pakistan (2018)
